The findings from the 2019 PREA Data Collection found one incident of youth on youth nonconsensual touching. Following the investigation of the incident the act was found to be nonsexual intent yet still inappropriate horseplay. PREA Retaliation Monitoring was conducted between the clients by PREA Manager. Ongoing education for both staff and clients was an area for improvement by helping staff be more aware of reporting obligations regardless of the type of offense and helping clients be more aware of overall appropriate boundaries. The staff sexual misconduct was investigated following a report that client felt the initial search was not conducted properly and staff observed a client's genitals. The investigation found the staff follow policy and procedures of searching. This incident did trigger larger review of overall policy and procedures for the agency. The goal is to provide trauma informed approach to searching of clients and maintain safety of all residents in the program. Two staff member being searches has been implemented. The facility is conducting less invasive client searches.
