Child & Adolescent Psychiatric Specialty Clinic

Creating Healthy Communities One Person at a Time

Child & Adolescent Psychiatric Specialty Clinic

Adverse Childhood Experiences

Great Lakes Recovery Centers (GLRC) established the Child & Adolescent Psychiatric Specialty Clinic to help address the unmet need for psychiatric and specialty mental health services for children and families.

GLRC believes that effectively addressing adverse childhood experiences and mental health issues requires access to a full spectrum of services including psychiatric care, specialty assessment and treatment services, and clinicians specially trained in trauma, childhood development, and family systems.

GLRC's philosophy for treating behavioral health needs is to assist individuals and families in finding their unique pathway to healing and understanding that no two individuals are the same. GLRC will help individuals utilize many different pathways to find their own personal path to healing.

Population

The target population for the Child & Adolescent Psychiatric Specialty Clinic includes those children, ages five through eighteen, dealing with moderate to severe mental health issues. Clients will be required to participate in conjoint mental health treatment, with ongoing communication between the therapist and psychiatrist.

Services Provided

Under the direction of a Licensed Psychiatrist, the Child & Adolescent Psychiatric Specialty Clinic hosts a comprehensive array of services including:

- Psychiatric Evaluations
- Medication Management
- Neurodevelopmental Trauma Assessments
- Parent Education
- Trauma-Focused Cognitive Behavioral Therapy
- Cognitive Behavioral Therapy
- Individual/Play Therapy
- Family Therapy
- Family Systems Approach
- Collaboration with community providers and coordination of care

The close proximity of children's services allows for ease of access for coordination of auxiliary care, including individual, family and group therapy, as well as coordination of care with local medical practitioners.

The clinic is located at 97 S. 4th Street, Suite A, in Ishpeming and open Monday through Friday with special hours for psychiatric access. Conjoint mental health services for children can be scheduled with our specially trained children's therapists on an ongoing basis.

Adverse Childhood Experiences (ACEs) affect individuals into adulthood, resulting in higher risk for various health problems. Once we identify that a child is experiencing ACEs, we can connect them with age specific resources needed to prevent adverse effects or promote healing.

Neuroscientific research is overwhelming regarding the lifelong impact of unaddressed childhood adversity and mental health issues. ACEs are common and highly interrelated. They do not distinguish between gender, geography, or economic status.
